

Enterprise Policy & Governance Standard

Document ID: POL-FIN-2026-V3 | Classification: Confidential - Internal Operations | Effective: Fiscal Year 2025-2026

1. Corporate Revenue Recognition Standard (ASC 606 / GAAP)

This policy defines the authoritative standards for calculating financial metrics across all corporate reporting systems, Business Intelligence dashboards (Looker), and AI agent workflows.

- **Gross Revenue:** Total value of all merchandise ordered prior to cancellations or returns (LookML formula: SUM(order_items.sale_price)).
- **Net Revenue (Certified Gold):** Revenue is recognized *only upon fulfillment completion*. Cancelled, returned, or in-transit orders are excluded. Strict LookML definition: SUM(CASE WHEN order_items.status = 'Complete' THEN order_items.sale_price ELSE 0 END).
- **Fiscal Calendar:** The corporate fiscal year begins **February 1** (fiscal_month_offset: 1). Fiscal Quarter 1 covers February through April, Q2 covers May through July, Q3 covers August through October, and Q4 covers November through January.

2. Customer Return, Refund & Cancellation Policy

- **Standard Return Window:** Retail customers may request refunds within 30 days of shipment delivery for unworn apparel and unopened merchandise.
- **Refund Processing:** Upon receipt and inspection at distribution facilities, refunds are remitted to the original payment method within 3 to 5 business days.
- **Restocking Fees:** A 15% restocking deduction applies to open-box consumer electronics and clearance items.
- **Impact on Net Revenue:** Returned items are marked with status Returned in the order management database and are automatically excluded from the Gold Net Revenue metric.

3. Customer Data Privacy & PII Protection Guidelines (GDPR / CCPA)

In compliance with global data privacy mandates, all customer-level direct identifiers are tagged in Google Cloud Knowledge Catalog (Dataplex) with **PII = True** and access classification **RESTRICTED**.

Field Name	Classification	Looker View	Policy Restriction
users.email	PII - Direct Identifier	users	Strictly Prohibited in AI responses. Masking required.
users.phone	PII - Direct Identifier	users	Strictly Prohibited in AI responses. Masking required.
users.street_address	PII - Geolocation	users	Prohibited. Use aggregated State or Country only.
users.country / state	Non-PII (Aggregated)	users	Approved for geographic revenue segmentation.

4. Looker Semantic Layer Certification Requirements

To prevent non-deterministic calculations and SQL hallucinations: **All AI assistants, analytics tools, and downstream consumers must query the Looker Semantic Layer via Looker MCP or the Looker Query API.** Raw SQL queries bypassing Looker's governed Explores (customer_orders) are non-compliant with corporate audit standards.
